

Critical Environment Overhead Ionizer

MODEL 5810i

The Simco-Ion Critical Environment Overhead Ionizer Model 5810i is designed to provide industry-leading balanced ionization performance in cleanroom environments. The Model 5810i is certified for use in ISO Class 4 cleanrooms (Fed. Std. 209(e) Class 10). The ionizer can operate with external sensors to maintain precise balance (better than $\pm 1V$) by altering ion output and adapting to environment changes. With the reliability of steady-state DC, the established method for eliminating the effects of ESD and ESD-induced electromagnetic interference (EMI) in high-tech facilities, the Model 5810i delivers maximum ion output where and when you need it.

Complete compatibility with the operating conditions in today's cleanrooms is ensured with silicone-free air bearing fans. Each fan is engineered for cleanliness, and sealed off from the rest of the chassis to meet critical cleanroom requirements. Ionizers that don't match these quality standards risk contaminating manufacturing processes and possibly reducing product yields.

Fan Speed Choices

The 5810i was designed specifically for use in cleanrooms up to and including ISO 14644 Class 4 (Fed. Std. 209(e) Class 10) in cleanliness. To minimize disruption of laminar airflow, the unit has a 3-position fan setting that optimizes static discharge performance with the smallest volume and velocity of airflow.

Factory Monitoring System

The blower includes an LED alarm light that indicates a range of possible conditions, including absence of ionization at the emitter points, or a stopped fan. An optional Audible Alarm is available. An optional Facility Monitoring System (FMS) provides an industry-standard 4-20 mA signal to your work cell controller for error detection.

Auto-clean System

The optional, Auto-clean System is an automated feature that provides reduced operation costs due to lower maintenance. The Auto-clean System features a brush mechanism that sweeps the emitter points when the blower is turned off and on, allowing the Model 5810i to continually perform at optimum ion output and balance.

$\pm 1V$ Operation

The Model 5810i ionizer's optional external feedback sensor operates with the Novx Process Monitor Series 7000, Novx Single-fan Ionizer Controller Series 3150/3151, Novx Passive Detection System Series 3350 and Novx Active Detection System Series 3360 to detect and automatically correct the balance. With the antenna placed at the target area, feedback is sent to the Model 5810i blower's internal control system. This ensures that your target maintains a $\pm 1V$ or better balance at all times.
