# DISPOSABLE MEDICAL 3-PLY FACEMASK

## DYC601-3P

- + Non-woven spunbonded polypropylene and polyethylene
- + 3-ply mask, splash resistant, non-sterile

Protecting Your Loved Ones with Genuine Facemask You Can Trust

## MATERIAL DESCRIPTION

The facemask is made using an ultra-fine polypropylene which provides superior filtration efficiency and makes a superior contamination barrier in cleanroom applications. To assure product purity, the mask manufacturing process is performed in a cleanroom environment.

Using ultrasonic seal bonding on all seams provides strong durable seals without needle holes or thread that can cause irritation to the wearer and contamination build up on the mask.

The flexible nose bridge wire allows the user to fit the mask to their face reducing nose and face irritation. The mask material has been selected to eliminate any chance of allergic reaction or irritation to the wearer's skin.

Our facemasks are produced in a cleanroom environment in Singapore. Products are both Singapore and European CE marking certified, conforming with health, safety and environmental protection standards.

## PHYSICAL PROPERTIES
